PROFESSIONAL SUMMARY

Full-stack software developer having more than 13+ months experience in MERN/TypeScript Stack, LLM Pipeline development and Workflow Automation. Possessing the capability of converting business requirements into practical technical solutions, there by improving the efficiency. A quick learner and a dedicated person who works best in stressful environments and can coordinate well in various team settings. Wanting to join an organization where I can contribute towards the development process using my analytical, functional and technical skills.

EXPERIENCE

ICS System Solution — Software Developer

Full-time since Jan 2026; started as Intern in Aug 2025

- **Lead-to-Deal CRM Pipeline:** Built a complete lead tracking pipeline from scratch using Node.js, and PostgreSQL. It easily handles 50 to 100 new leads every day and guides them through a six-step sales process. I also added features to log customer conversations and send team notifications. This completely replaced an old paper notebook system, making it instantly easy for the team to find any customer's follow-up history.
- **Investment Lifecycle Engine:** Designed and built an automated system using Node.js and PostgreSQL to manage investments. It handles payment approvals, creates schedules, and catches late payments automatically. This replaced slow, handwritten ledgers and saved the operations team a lot of manual work.

EDUCATION

International University of Business Agriculture & Technology (IUBAT) — Jan. 2022 – Apr. 2026

B.Sc. in Computer Science & Engineering — *CGPA: 3.62*

PROJECTS

PropertyHub AI

Full-stack B2B2C real estate marketplace with Stripe payments, installment plans, and LLM-powered property assistant

- Designed the booking-and-installment lifecycle: automated cancellation on missed payment deadlines, percentage-based refund calculation with retention penalties per cancellation policy, and admin-level manual override for booking status changes.
- Implemented JWT-based RBAC across Admin, Vendor, and Customer roles using HttpOnly cookies for secure session handling; applied Helmet middleware for HTTP header hardening and rate-limiting on login and payment routes to mitigate **brute-force attacks**.
- Designed a **tool-calling pipeline** where the LLM (Groq) parses user intent and generates structured query parameters, which are executed against MongoDB - eliminating **hallucination risk** by grounding every response in real-time database state.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, C++, SQL
- **Backend & Architecture:** Node.js, Express.js, REST APIs, OOP, MVC Architecture
- **Frontend:** React, Tailwind CSS, HTML, CSS
- **Databases & Query Tools:** PostgreSQL, MySQL, MongoDB, Knex.js, Database Migrations
- **Security & Validation:** JWT Authentication, RBAC, Zod Validation
- **State & File Management:** Zustand, Cloudinary
- **LLM & AI-Assisted Development:** Prompt Engineering, LLM API Integration, AI Agents, Agentic Coding, Parallel Agent Orchestration, AI-Assisted Code Review & Debugging
- **Deployment & DevOps:** Linux, VPS Deployment, Docker, CI/CD, Git, GitHub, Render, Vercel, cPanel

CERTIFICATIONS

- Machine Learning with python — ICT Division (EDGE)
